

HARSH MODI

SOFTWARE ENGINEER

Hmodi11615@gmail.com +1(551)260-8493 [linkedin.com/harsh-modi-007](https://www.linkedin.com/in/harsh-modi-007) github.com/Harsh1925 [Portfolio](#)

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, Go, SQL, HTML, CSS
Frontend: React.js, Redux, Tailwind CSS, Material UI, Bootstrap
Backend: Node.js, Express.js, REST APIs, GraphQL, Socket.IO, Django, Gin
Databases: MongoDB, PostgreSQL, MySQL, SQLite, Firebase Firestore
Cloud/DevOps: Docker, Kubernetes, AWS, GCP, Jenkins, GitHub Actions, CI/CD
Security/Testing: AES-GCM, JWT, OAuth 2.0, Zod, Helmet, rate limiting, Jest, Postman, Prometheus
Tools/Concepts: Git, GitHub, Linux, Prisma ORM, microservices, observability, accessibility, Agile, Scrum, code reviews

EXPERIENCE

Shoptaki | Software Engineer New York City, NY | April 2025 – Present
• Built a local-first messaging service with 20+ REST APIs by designing a Node.js, Express, and Socket.IO microservice architecture for high-volume real-time communication.
• Reduced hash-match latency to 5-10 ms by designing a TTL cache that removed database round trips and improved storage I/O for high-volume messaging workloads.
• Improved platform scalability and simplified service orchestration by containerizing a 5-service microservices environment across Gateway, Auth, User, Master, and Messaging with Docker.
• Strengthened platform security by implementing Zod validation, Helmet, rate limiting, AES-GCM encryption, HKDF-based per-message key derivation, and salted SHA-256 contact discovery.
• Improved observability and release confidence by adding Prometheus monitoring, structured logging, and load testing to validate peak-traffic performance.

IBM | Software Developer Mumbai, India | October 2022 – August 2023
• Improved system modularity by 40% by helping launch 20+ RESTful APIs and unifying SQL/NoSQL data models across React, Node.js, and Express applications.
• Reduced page load times by 35% and raised Lighthouse accessibility scores above 95 by building responsive React and TypeScript components and optimizing client-side rendering.
• Improved API response times by 25% and improved reliability via Jest/Postman testing by optimizing backend services and tightening validation and request-processing logic.
• Cut release times by 40% by improving CI/CD pipelines with Docker, Jenkins, and GitHub Actions and helping move the team toward one-touch deployments.
• Worked across the SDLC with engineers, product managers, and designers to deliver features from implementation through testing and deployment.

PROJECTS

Movie Streaming Platform with AI Recommendations | React | Hooks | Go (Gin) | MongoDB | LangChainGo
• Built a streaming platform for 1,000+ titles and reduced AI recommendation costs by 60% while maintaining sub-200 ms response times through caching and query optimization.
• Integrated personalized recommendation flows using LangChainGo, OpenAI, Go/Gin APIs, and MongoDB to render dynamic React content feeds with cached responses and retry handling.
• Improved search and recommendation performance by 40% under high concurrency by indexing MongoDB collections and tuning queries across titles, genres, and user profiles.

Squaddle – Team Matchmaking Platform | React | Auth | State Management | Node.js | MongoDB
• Designed and launched a React team matchmaking application with swipe-based discovery, profile workflows, and authenticated onboarding, increasing collaboration engagement by 25%.
• Reduced client-side load times by 30% by optimizing the MERN data pipeline with selector memoization, indexed MongoDB queries, and lean API payloads.
• Improved maintainability and user trust by implementing reusable React components, request validation, structured error handling, and role-based workflows.

HireMaster – Freelance Bidding Platform | React | Redux | Material UI | Auth | Google APIs
• Deployed a full-stack freelance marketplace serving 200+ active users and increased engagement by 40% by integrating location-based workflows with Google Maps APIs.
• Engineered robust transactional architecture utilizing secured bid-to-payment workflows for 200+ users by implementing JWT-based authentication and event-driven GraphQL mutations.

CERTIFICATIONS & COMMUNITY

Front-End Apps with React – IBM May 2023
Python Data Structures – University of Michigan December 2021
Invincible NGO - Coordinated logistics for nationwide trekking camps and briefed participants on safety and route

EDUCATION

MS in Computer Science, Pace University, NY September 2023 - May 2025
B.Tech. in Computer Science, Ahmedabad University, Ahmedabad August 2019 - June 2023
